

Barnant Gilmont Flowmeter Certification

Barnant offers Certification Services for their Gilmont Line of Flowmeters. The certification is per National Institute of Standards and Technology (NIST) Standards.

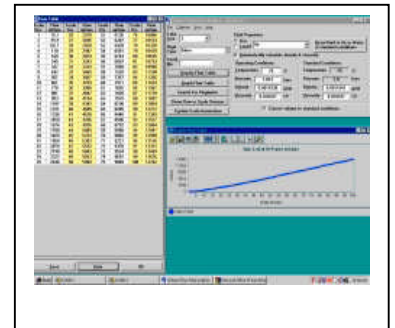

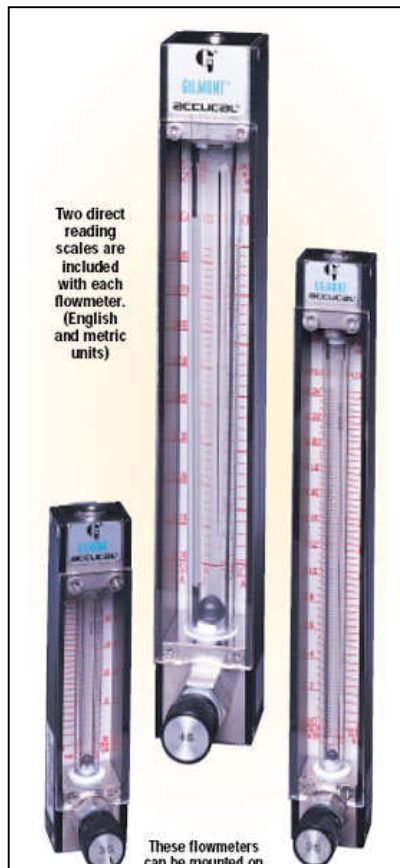

This service is to provide certification of new flowmeters before they ship and also for pre-owned flowmeters that can be sent to Barnant to be certified or re-certified.

Our flowmeter calibrations are traceable to NIST and our flow calibration facilities are reviewed under a system compliant with ANSI Z540-1, ISO 10012-1 and MIL-STD-45662A.

Both 5-Point and 10-Point Certifications are available. We also certify non-Gilmont Flowmeters as well.

Please contact Grayledge Pump & Industrial to arrange for this Certification Service.

Barnant Gilmont also offers Flow Analysis Software. Please contact Grayledge for additional information.
